

## HIDROMAC; CREATIVITY, NATURE AND I+D

Even though Hidromac is legally formed during the year 2006, it's the result of research and investigation for more than a decade, in the world of ornamental plants, and in the development of low maintenance systems.

The result of such research, its a brand new technique that taken on to the practical field, allowed us to develop different models in different materials of "hidro-pots", capable of harbouring and maintain in optimum conditions in interior and exterior plants with only two or three watering's a year.

Thanks to I+D and a optimum decision on prototypes, we can now launch on to the market a full ranged of "hidro-pots" in different sizes and materials, capable of fully satisfying the needs of this modern society, and the approaching to nature, through ornamental plants.

We have reached that very demanded balance between minimum maintenance and maximum care of the ornamental plants that surround us and bring beauty into our lives.

■ Quality guaranteed with its patented self watering system.

■ The best value for your money.

### "Relieve" model

Built with waterproof pure clay, with a 45 cm diameter and 52 cm of height including stand.

### Cordón Model

Built with waterproof pure clay, with a 47 cm diameter and 55 cm of height including stand.

### Different types of enamel for both models of "hidro-pots".

#### ENAMEL

#### OUTER DECORATIONS

Wood

Copper

Bronze

#### "COLD" COLOURS

#### HAND PAINTED

### Usage advice:

1. Fill the "hidro-pot" with substratum or the desired soil and insert the plant's root ball soaked with water.

2. Fill the rest of the pot with the rest of the soil and water abundantly

3. Fill the deposit with water and add fertilisers or pesticides if desired
